

Objective

The Model aims to outperform the Bloomberg AusBond Bank Bill Index +2%, after fees and costs, over rolling 5-year periods.

Fund Description

The Pekada Arcturus Portfolio (the Model) is built and monitored using deep fundamental research on both asset allocation and fund manager selection. Asset allocation considerations include long term forecast returns for each asset class, as well as volatility and correlation. We then find exceptional managers that we believe work together to deliver on the Model's objectives. The composition of the Model will change from time to time, based on economic and market conditions, ongoing research, as well as a result of continuous monitoring of both current and potential fund managers.

Growth of \$100,000 Total Return

Performance to 31 May 2026	1 mth	1 yr	Inception p.a.#
Growth Performance	1.60%	3.53%	2.04%

Australian Fixed Interest	25.0%	44.5%	19.5%

Market Commentary

Investors continued to look beyond the closure of the Strait of Hormuz throughout May and cast their focus on robust US-market earnings growth. Oil prices slumped at the end of the month when signs emerged that the US and Iran may have reached a preliminary agreement to extend a ceasefire and ease shipping restrictions. And as markets continued to position for a de-escalation of hostilities, bonds rallied late in the month on hopes that lower oil prices would eventually drag inflation down to more comfortable levels.

Including dividends and in US dollar terms, the benchmark S&P 500 index gained 5.3%, the tech-heavy Nasdaq 100 returned 10.6% (this followed its best month in twenty-three years), while returns for the Dow Jones Industrial index increased 2.9%. The Magnificent Seven added 6.6%, on robust corporate earnings and bullish guidance. Elsewhere, the ASX 200 delivered a more moderate 1.2%, once again underperforming domestic small caps, which returned 2.0%. The A-REIT index was led higher by Goodman Group, but the return composition was relatively poor. Global property lost 0.3% and global listed infrastructure posted a 1.9% loss, as real yields rose throughout May.

Fixed interest markets delivered solid returns in the month, but domestic bonds outperformed as defensive investors welcomed weaker-than-expected labour market and inflation releases. Prior to the 'softer' data, traders were positioned for nearly two more rate hikes by the RBA. But this quickly gave way to renewed optimism that the 0.25% increase in May to 4.35% could be the peak. Meanwhile, the market's expected trajectory for the US funds rate continued to suggest that the Fed's cutting cycle was over, with the next move likely to be a hike in mid-2027.

Portfolio Commentary

The Pekada Arcturus model returned +1.72% in May, outperforming both its peers and the asset-weighted benchmark.

The L1 Capital Long Short Fund was again the standout performer in May, returning +6.92% for the month and +54.51% for the year. The Plato Global Shares Income Fund also performed well, returning +18.89% over 12 months and benefitting from its active overweight in Information Tech. Despite being income-focused, the Fund's total return was more heavily skewed to capital gains in May. Elsewhere, RQI Global Value Hedged returned +3.81% for the month, partly due to a stronger Australian dollar, which benefited its currency hedged position. Finally, the model's high-yielding domestic credit managers continue to perform their role in the portfolio well, with Alexander Credit Income Fund (+0.47%) and Realm High Income Fund (+0.97) both ahead of their respective benchmarks over 12 months.

A general risk-on sentiment in May saw weakness across the model's real assets holdings, with the Clearbridge RARE Infrastructure Income Fund (Hedged) returning -1.96% at month's end. Resolution Capital Global Property Securities Fund was also weaker, returning -0.41%.

Monthly Report May 2026
